

FiberSmartz Financial Management with Microsoft Dynamics NAV

“ End-to-end, Financial Management, Project Costing and Billing in Microsoft Dynamics NAV for Fiber Companies ”

Customer billing is time consuming and labor intensive yet key to cash flow and cash flow forecasting.

FiberSmartz NAV simplifies and speeds up the billing process by providing functionality to handle complex taxation scenarios along with contract changes. Service schedules based on contract term and period batch jobs that locate active contracts and circuits to be invoiced enables more accurate cash flow forecasting.

Internal CAPEX and maintenance projects can be complex and difficult to manage yet timely and accurate management of projects are key to financial stability.

FiberSmartz NAV streamlines the management of internal projects with functionality to create parent and child projects, manage purchase orders and invoices, compare original and revised estimates against actuals and move project cost to fixed assets.

IMMEDIATE RESULTS AMAZING ROI

 Short implementation cycle

90% lower processing costs

80% of FiberSmartz customers achieve ROI in less than a year

50% achieve ROI in less than six months

REDUCE TIME AND EFFORT SPENT ON ACCOUNTING TASKS

FiberSmartz with Microsoft Dynamics NAV (Navision) provides accounting and finance solutions to help you track and analyze your business information. With end-to-end integration, you can efficiently manage your general ledger, payables, receivables, inventory, analytical accounting, fixed assets, and cash flow, in addition to performing bank reconciliations and collections. Comprehensive, up-to-date financial information makes it easier to spot trends and gain insight into your business activities, so you can capitalize on your knowledge, make more informed business decisions and identify new opportunities.

MICROSOFT DYNAMICS HIGHLIGHTS

GENERAL LEDGER

Includes all the basic functionality necessary for setting up a company and posting to the general ledger, chart of accounts, general journals, sales tax, recurring journals, reversal journals and accruals.

- Set up multiple companies with their own GL
- Record and track deferred revenues
- Automate the process of deferring revenues and expenses over a pre-defined schedule through deferral templates
- Easily recognize revenues and expenses in periods other than the period in which the transaction is posted
- Define additional taxes and other applicable fees for different transaction types
- Create workflows for approval of sales and purchase documents

CUSTOMER CONTRACTS & BILLING

- Define different types of contracts to manage product and service offerings
- Bill at the contract, circuit and/or location level
- Apply MRC, ARC, NRC, taxes and other applicable fees
- Bill includes circuit details and location information
- Create an invoice schedule and track invoices generated for billing period and payments received against them
- Run periodic batch jobs that locate active contracts and circuits, then generate invoices against them

PROJECTS & RESOURCES

- Create internal CAPEX and maintenance projects
- Create parent and child projects
- Import original and revised estimates
- Create purchase orders for projects
- Receive automatic updates of receipts and invoices against purchase orders for a real-time comparison of project estimates against actuals
- Project end - get CWIP details, including cost codes and cost categories, to assist in the allocation of project cost to fixed assets
- Track projects with reference to customer contracts

FIXED ASSETS

Fiber companies invest heavily in capital projects to build infrastructure. It's imperative to have a financial system that records and tracks fixed assets accurately.

- Record and post different types of fixed asset transactions such as acquisitions, depreciation, write downs, appreciation and disposal
- Set up multiple depreciation books for each fixed asset to satisfy legal requirements and for tax and accounting purposes
- Define different methods and conditions for each book to calculate depreciation
- Track CWIP with cost codes and cost categories and transfer as a fixed asset via a simple conversion process
- Define main and component assets for more accurate tracking

CASH FLOW FORECAST

Accurate cash flow forecasting is a challenge for Fiber companies by virtue of the long duration and complex nature of contracts. Services, locations and circuits can change over the life of a contract due to upgrades, downgrades, term changes and deactivations, impacting cash flow. NAV's cash flow forecasting analyzes changes to contracts so you can predict how liquidity - cash and other treasure positions - will evolve over time.
